

# How do Cities Grow?

A Nexus between Urban Policies and Citizen Decisions

Complex Systems Summer School 2023

Alexius Wadell, Faith Masibili, Hanna Isaksson, Katarzyna Goch, Lydia Reader, Tingting Ji

Urban systems are dynamic, complex and self-adapting human modified environments that encompass processes and subsystems at multiple scales and levels

(Elmqvist et al., 2019; McPhearson et al., 2016)

## Scenarios of **cross-national** development

Scenarios of **cross-national** development

↑ **National** spatial policy directions

## Scenarios of **cross-national** development

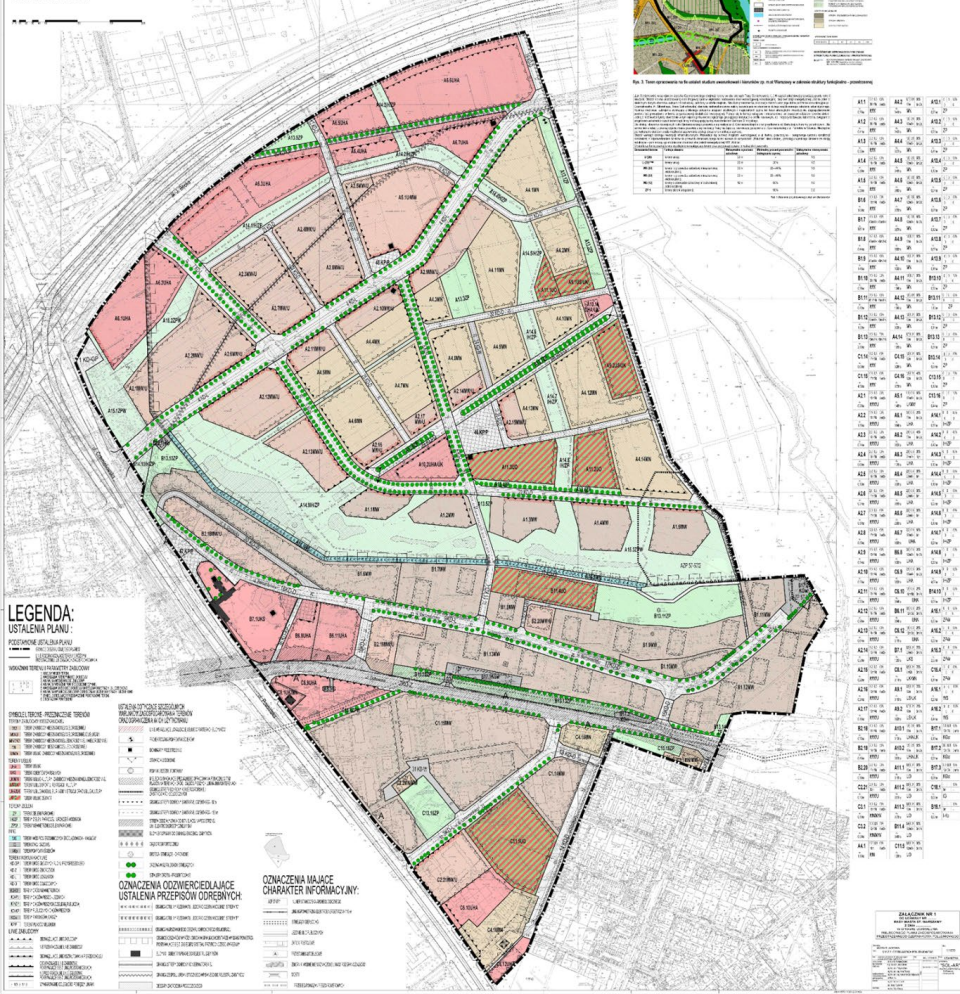

↑ **National** spatial policy directions

↑ **City-level** land use directions

## Research aim

To understand how planning-constrained location decisions of human individuals and their interactions shape urban land-use patterns.

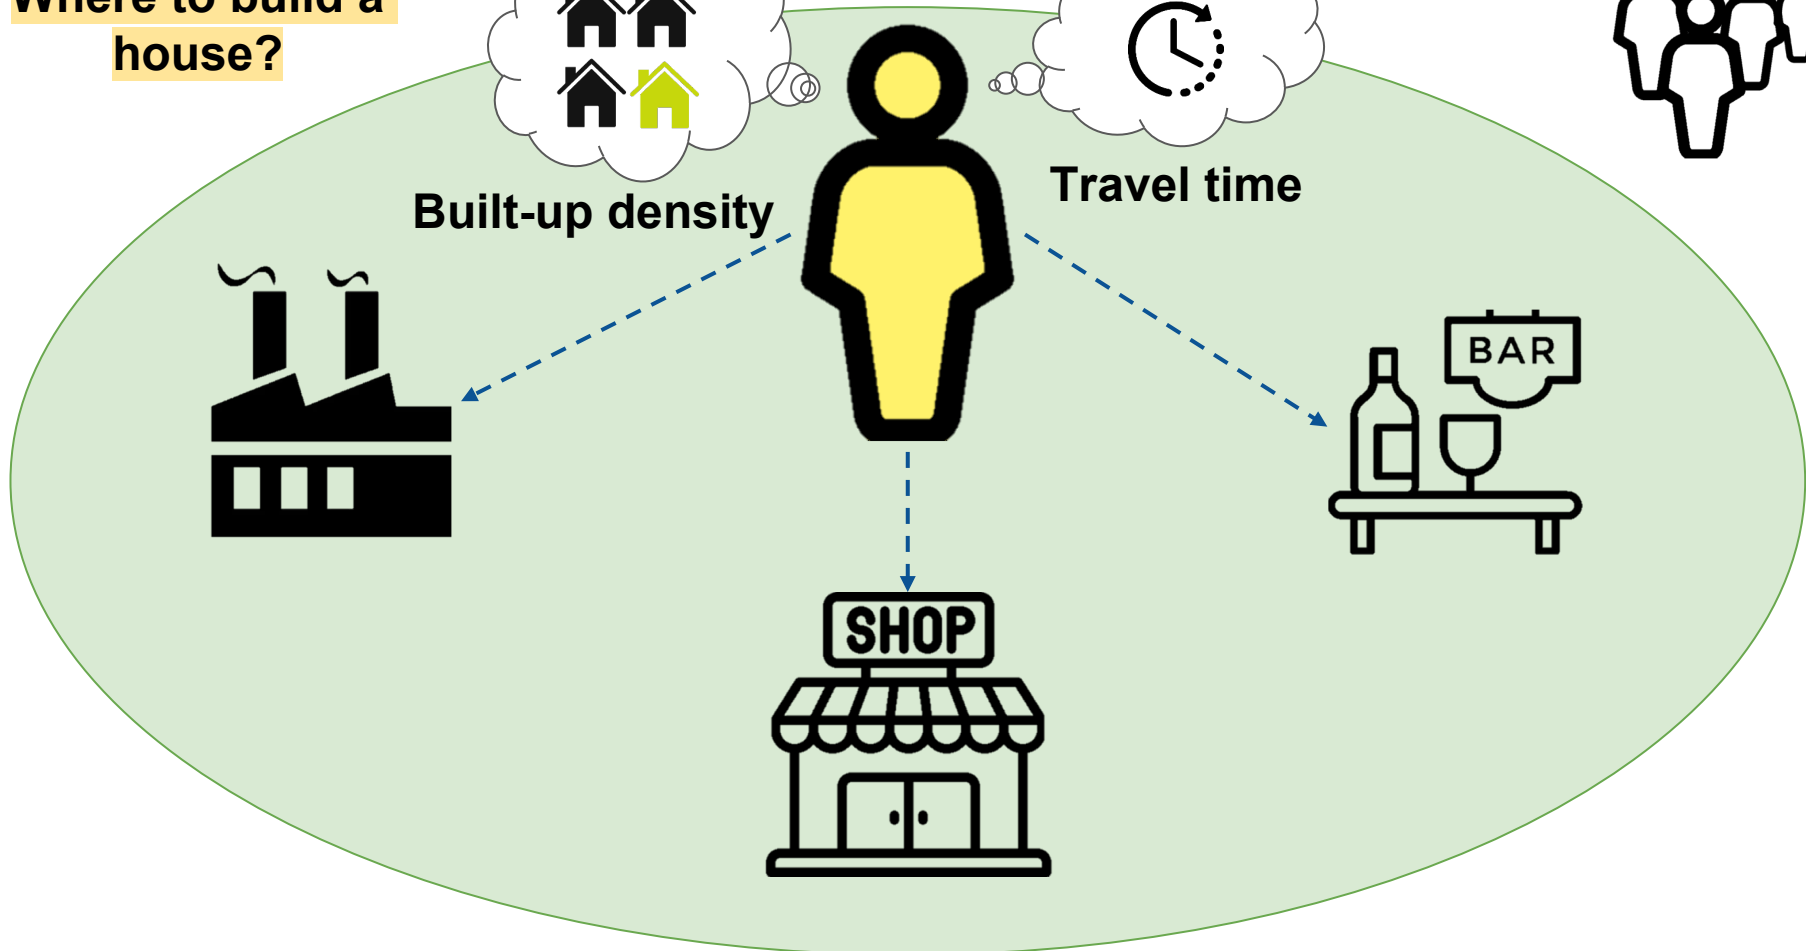

**Where to build a house?**

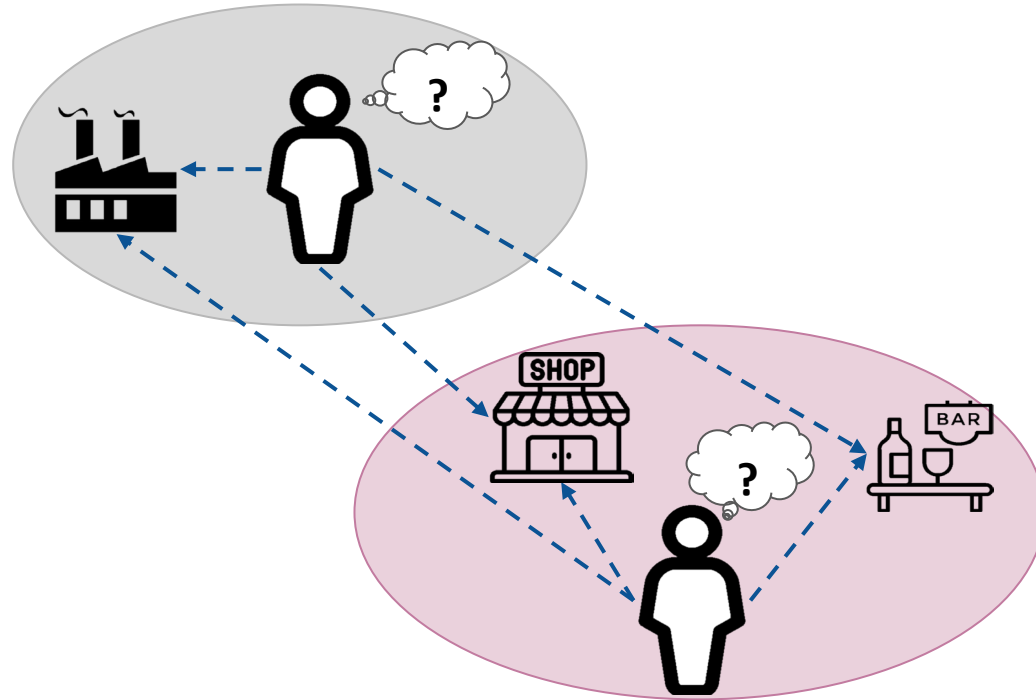

**Built-up density**

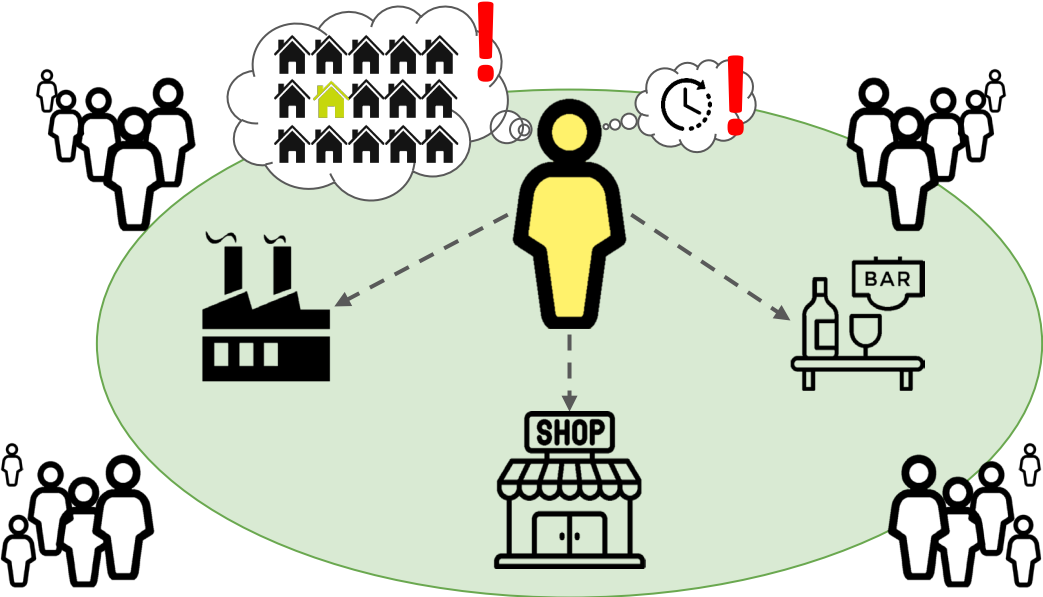

**Travel time**

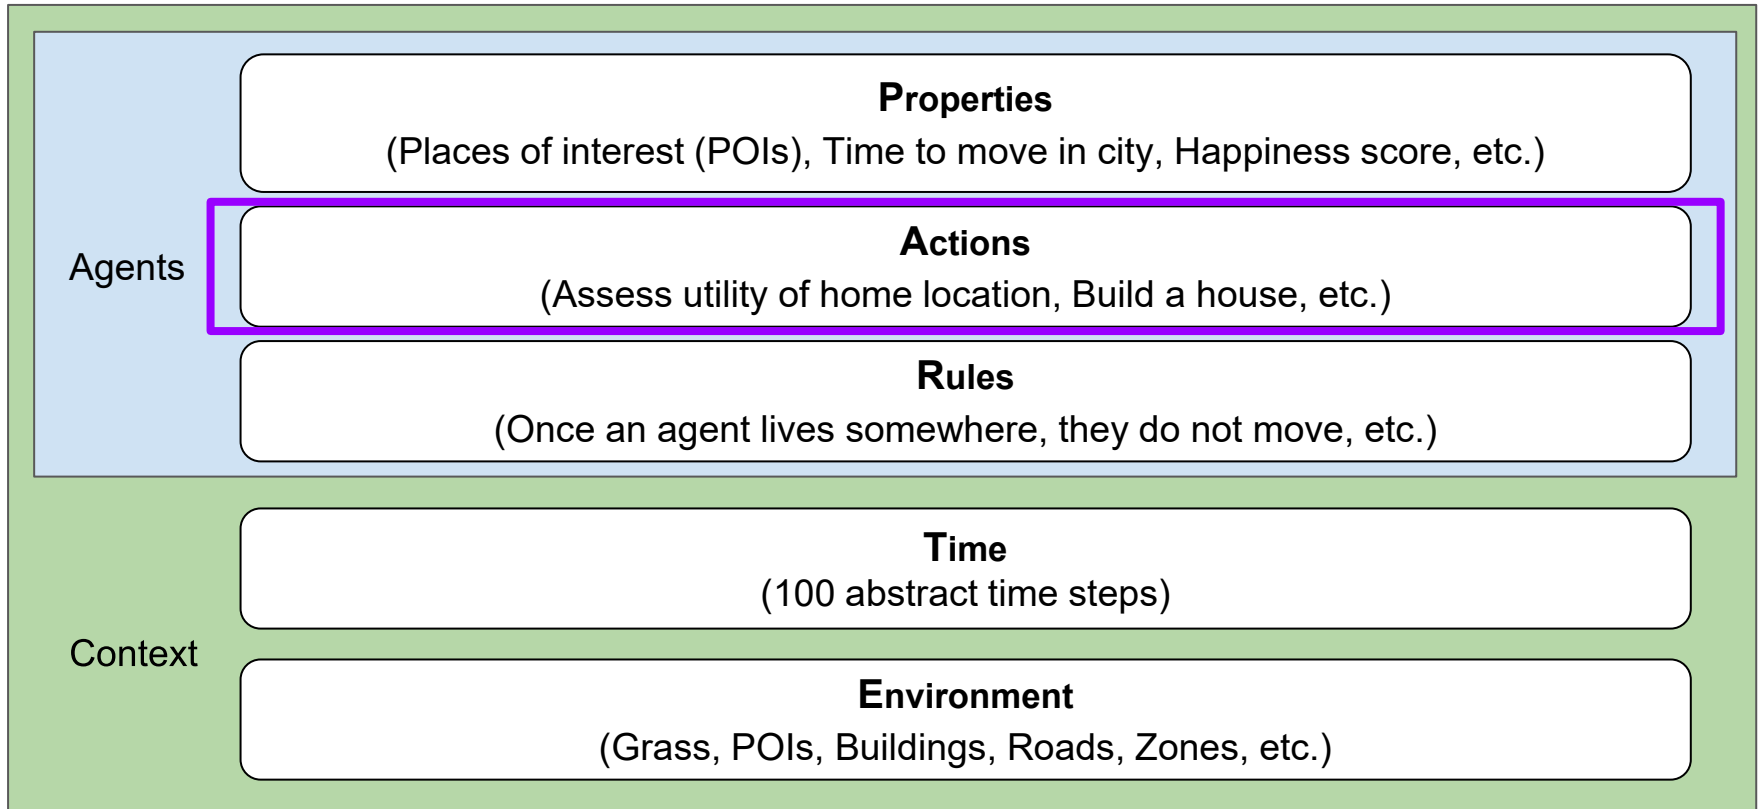

**Research question 1:** How citizens' subjective well-being are influenced by the trade-offs between top-down urban planning policies and bottom-up citizen decisions?

**Research question 2:** How urbanization patterns are influenced by or sensitive to the micro-level interactions of individual citizens?

# Model specification - PARTE framework

# Utility functions to select house locations

$$U_0 = T$$

- travel time to POIs

# Utility functions to select house locations

$$U_0 = T$$

- travel time to POIs

$$U_1 = T * Z$$

- travel time to POIs
- land-use zoning

# Utility functions to select house locations

$$U_0 = T$$

- travel time to POIs

$$U_1 = T * Z$$

- travel time to POIs
- land-use zoning

$$U_2 = T_{\alpha, \beta} * Z * D_{\alpha, \beta}$$

- travel time to POIs with **congestion**
- land-use zoning
- **overcrowding**

```

# Next steps

## 1. Model implementation

- a. Update utility functions of citizen agents
- b. Use real-world GIS environment (e.g., OpenStreetMap)
- c. Model calibration / validation

## 2. Data analysis

- a. Trajectories of happiness score of citizens
- b. Landscape metrics to see the dynamics of urban patterns
- c. What if scenarios on different zoning policies (e.g., transit-oriented city, modernization city)
- d. Sensitivity analysis of model parameters
